DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "gripping device, claims 4-6, line 1" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 4-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 4-6, line 1, it is unclear. In page 7, lines 20-23, applicant describes a gripping device (**not shown**) thus act as a grounding member, does applicant meant "**there is two different elements having a same function**"?

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Annis et al. (U. S. Patent 5,436,803).

As to claims 1, 7, and 9-13, Annis discloses a device and a method for protecting components within an electronic system (12, column 5, line 37) from radiated electromagnetic energy (column 6, lines 21-24) during concurrent maintenance as shown in figures 1-5, the device comprising:

a sheet (10, column 5, lines 37-38) of electromagnetic shielding material sized to overlay a portion of the electronic system (12);

an opening (neck 20-figure 1 having an opening) which is a slit formed in the sheet and sized for accessing the components within the electronic system (12); and

a grounding member (18, column 5, lines 50-51) electrically coupled to the sheet and adapted to be coupled to a ground.

As to claim 2, Annis discloses a device as shown in figure 1 wherein the sheet comprises a transparent material.

As to claim 3, Annis discloses a device as shown in figures 1-5 wherein the sheet comprises a flexible shielding material of a metallized polymer (column 6, lines 6-12).

As best understood to claims 4-6, Annis discloses a device wherein said grounding member (18) attached to said sheet (10) and electrically coupled to said sheet and configured to electrically couple to the electronic system.

As to claim 8, Annis discloses a device wherein as shown in figure 4 the opening is a closable flap (26, column 7, lines 15-34).
